

Setup :

01 - Project Folder : Create a folder and give it a name.

02 - Change Claude Mode : to **Plan mode**

03 - Create [claude.md](#) using **prompt** :

prompt :

Hi Claude, I want you to generate a Claude.md file and save it in this project:
This project is built to help me create and manage n8n workflows using Claude.

You have access to:

- n8n MCP server
- n8n Skills

Your job is to:

- Build high-quality n8n workflows
- Suggest improvements and better approaches
- Ask questions if requirements are unclear
- Use available tools and skills when relevant

Always focus on:

- Simple, efficient, and production-ready workflows
- Clear step-by-step logic

04 - Add **n8n MCP** & **n8n Skills** to claude.md :

n8n MCP : <https://github.com/czlonkowski/n8n-mcp>

n8n Skills : <https://github.com/czlonkowski/n8n-skills>

Use these to make the claude.md better

05 - Connect **n8n MCP** & **n8n Skills** to claude code

Install n8n MCP : <https://github.com/czlonkowski/n8n-mcp>

Install n8n Skills : <https://github.com/czlonkowski/n8n-skills>

install these and Make sure are accessible by claude code in this project

07 - provide your n8n credentials :

- N8N_API_URL : <https://n8n.srv1145958.hstgr.cloud>
- N8N_API_KEY : from settings

08 - **Restart** : close claude extension and run claude in **terminal**

09 - **Check** if n8n MCP & n8n Skills are installed :

- list all the n8n workflows from my n8n account?
- What tools can I use ?

Building Workflows :

- **Clear context** : don't run out of context window /clear
- **Claude Ai** :

i want a simple prompt to use on claude code to plan for an n8n workflow that will allow me to do seo for my wordpress website

- Change to **Plan mode** : use prompt

Write a complete Plan for an n8n workflow that automates SEO tasks for a WordPress website. The workflow should cover the following:

Goals

- Automate on-page SEO improvements for WordPress posts/pages
- Monitor keyword rankings or site health
- Generate or suggest SEO-optimized content (titles, meta descriptions, etc.)

What I need from you

1. Workflow Overview : Describe the full workflow in plain steps (what triggers it, what it does, what the output is)
2. n8n Nodes to Use : List each node needed (e.g. HTTP Request, WordPress, OpenAI, Google Sheets, Cron, etc.) with a one-line explanation of what each one does
3. Data Flow Diagram : Show the flow in this format:
[Trigger] → [Node 1] → [Node 2] → ... → [Output]
4. WordPress Integration : Explain how to connect n8n to WordPress (REST API, credentials needed, endpoints to use)
5. SEO Tasks Automated : For each task below, specify the node(s) and logic:
 - Fetching posts that are missing meta descriptions
 - Generating meta descriptions using AI
 - Updating posts via WordPress API
 - (Optional) Sending a report to Google Sheets or email
6. Step-by-step Build Plan : Break the workflow into phases I can build and test one at a time
7. Potential Issues & Tips : Warn me about common errors (auth, API limits, data formatting)

My Setup

- WordPress site with REST API enabled
- n8n self-hosted (or cloud — adjust if needed)
- I want to use an AI node (OpenAI or a local model) for content generation

Start with the simplest working version of this workflow, then suggest how to expand it.
